

Application Packaging

Application Packaging is the process used by the organisations for preparing software application to deploy or make it production ready.

Application packaging updates different versions of softwares which is also called Software as a Service(SaaS) apps package.

Application Packaging benefits

- ensures a consistent, stable environment
- increases the efficiency of software management
- helps to avoid security vulnerabilities
- helps reduce the on-going administration and support costs.

Steps to install MSIX

1. Click on Start Menu
